

Helpful Facts about our Premium Fragrance Oils - Manufacturer's Grade

All of our fragrance oils are Manufacturer's Grade oils. This means that our Fragrance Oils are in a pure highly concentrated form meant for dilution in a base product and should never be used directly on the skin undiluted. They contain no Dipropylene Glycol, alcohol, or other cheap diluents. They must first be added to products such as soaps, candles, lotions, bubble bath, shampoo, crème perfumes, or to a fixed oil (jojoba oil, sweet almond, etc.). No additional or artificial coloring is added. They are highly fragrant oils that will yield a long lasting aroma with clear bold notes. Use an alternative choice for fragrances that are more costly or unattainable in natural form. Fragrance oils are not to be used for lip balm purposes.

We have also included a selection of essential oil renditions to our line. They are infused with a small percentage of essential oils into the formulas to keep them as true to their natural origins as possible. Fragrance oils do not have any therapeutic qualities as they are synthetically processed oils used to scent products.

For Soaps:

When scenting soap the industry standard is $\frac{3}{4}$ oz. fragrance oil to 1 pound.

We suggest $\frac{3}{4}$ oz. to 1 oz. per pound.

For Candles:

When scenting candles the industry norm is a 6% pour. We suggest a 6 to 7% pour or, 1 1/4 oz. fragrance oil per pound of wax. Good for gel candles as the oils have a flash point above 175 degrees. For Bath products: When scenting a gallon of bath product, we suggest the industry standard of 1 1/2 oz. per gallon. However, the amount used will vary from scent to scent and how strong you desire the bath product to be.

Here's some additional applications for our Fragrance Oils:

- Scent soaps, candles and incense;
- Blend with bath and body products and more;
- Simmering pots and lamp rings;
- Add to vacuum cleaner bags;
- Refresh potpourri, sachets;
- Place on a/c filters;
- Add to water when mopping floors;
- Put in linen closets;
- Place on cloth and use in drawers, closets, cars, etc.;
- Add on pillow cases;
- Add a drop to your stationery.

Fragrance oils cannot be returned once they have been shipped so we suggest you try a one ounce sample size first.
